

SMS Precision Projector CM F

A secure position for heavy projectors.

Adjust the image simply and accurately with the aid of the ingenious joint, which can hold heavy projectors secure in the selected position. Fine adjustment, including tilt, is made directly at the projector bracket, without the need for any tools. This minimises the need for image adjustment using the projector, and gives significantly more rapid and easier installation. Cables are effectively concealed in the cable holder of the column and a white cover plate is mounted last, when all cables are in place, for simple and nice-looking installation. Delivered with a universal slide that can be used with most heavy projectors.

A very stable solution that is also easy to service. Available in two lengths: one version of length 380 mm that can be cut down by as much as 170 mm, and a shorter version of length 110 mm, which cannot be cut to length.

INFO

Finish: white

Maximum weight projector: 20 kg

Minimum weight projector: can vary, depending on the hole pattern on the backside of the projector.

Weight: 1 - 3 kg

Length: 110 mm (cannot be cut), 380 mm (can be cut by a maximum of 170 mm)

Fine adjustment: fine adjustment does not require any tools.
